

FloodStop Systems-Preventing Serious Water Damage From Appliance Failure

FloodStop products provide the most affordable solution to property protection from water damage caused by failed Washing Machines, Water Heaters and Refrigerators. These Appliances develop mechanical failures, and water lines and hoses can burst from normal everyday use. Whether at home, at work, or on vacation, these flooding events can go undetected for hours or even days. Each FloodStop product is an easily installed appliance-specific solution.

	<p style="text-align: center;"><u>FloodStop System I 34H90 for Washing Machines</u></p> <p>Washing Machines are one of the most damaging appliances within the home. Washing Machine related flooding can happen at anytime, from hoses with ruptures or cracked fittings, to internal failures from clamps, valves, pumps, drains and failed switches. FloodStop I automatically shuts off the water supply to the Washing Machine and sounds an alarm, leaving all other household fixtures and appliances operational. Easily installed in ten minutes. Each kit includes two 3/4 inch solenoid valves (hose threaded with union), a simple control unit, a water/leak sensor and an AC power adapter.</p>
	<p style="text-align: center;"><u>FloodStop 14C for Ice Makers, Water Filters and all 1/4" Applications</u></p> <p>The FloodStop 14C is ideal for water filters and ice makers. Water Filter and Ice maker components are small and break easily. Water-line breaks develop from movement, accidental bumping and simple vibration. In many cases a crack in the water-line grows from simple vibrations, eventually and unexpectedly rupturing, and then flooding the property. Whether at home, at work, or on vacation these flooding events can go undetected for hours or even days.</p>
	<p style="text-align: center;"><u>FloodStop NPT34 for Water Heaters</u></p> <p>This model features a Motorized Brass Ball Valve and a standard 3/4" NPT Pipe Threaded union to accommodate almost any existing pipe. It also is equipped with battery backup to allow this valve to turn off the water supply even during a power outage! FloodStop NPT3/4 automatically shuts off the water supply to the Water Heater and sounds an alarm, leaving all other household fixtures and appliances operational. Each kit includes one 3/4 inch Brass Ball Valve with NPT threaded unions, the new battery backup controller, a water/leak sensor and an AC power adapter</p>
	<p style="text-align: center;"><u>FloodStop 3/8-CD for Sink/Basin Applications.</u></p> <p>The FS3/8 CD comes with two valves (one for the hot water line and another for the cold water line). This model utilizes the same valve type that is used in the FS 3/8-C unit for the Dishwasher. The CD refers to "Compression" threads and "Dual" valves. The FS 3/8-CD kit provides a low cost alternative for those who want to prevent water damage from sinks and their supply lines.</p>
	<p style="text-align: center;"><u>FloodStop 38C for Dishwashers, Toilets and all 3/8" applications</u></p> <p>The FloodStop 38C is ideal for Dishwashers, Toilets and all applications with a 3/8" compression fit supply line. Battery back-up is included to allow it to turn off the supply of water even during power outages! It automatically shuts off the water supply to the appliance and sounds an alarm, leaving all other household fixtures and appliances operational.</p> <p>The FloodStop 3/8C kit is easily installed and provides protection from devastating water damage caused by appliance leaks. Each kit includes one solenoid valve with 3/8 inch compression fittings, the new battery backup Controller, a water/leak sensor and an AC power adapter.</p>
