

Drive Alert System

The Drive-Alert Driveway Alarm – Used by the Security Industry

The DA-500 Drive-Alert Driveway Alarm System is the security industry's most-often used method for detecting when a vehicle enters a driveway. A variety of features and options make this unit ideal for both residential and commercial applications. The Drive-Alert is a multi-purpose, solid-state electronic alarm system designed to detect vehicle traffic in driveway, farm lanes, intersections, and any areas where knowledge of vehicle movement is desired or necessary.

The DA-500 Drive Alert is mounted easily in any enclosed area with 120 VAC access. The sensor is buried 6" deep, parallel to the drive or area being protected. By a simple adjustment at the control box, the sensitivity of the sensor's operating range and the length of sound time for the electronic whistle can be changed.

Mier also offers various accessories for the DA-500 Drive-Alert unit, which can enhance the effectiveness and versatility of the system. How often have you been surprised or startled by an unexpected caller at your door? Or how often have you looked out your window to see a truck or car in your drive...or just leaving?

In this day of rapidly rising crime in rural and suburban areas, you need to know who is entering your property. The Drive-Alert lets you know just that – by triggering an electronic sound or turning on a light in your home whenever it detects a vehicle in your driveway.

The Drive-Alert works by sensing the motion of a metal object that passes within eight feet of a buried sensor. When a car, truck, or other object passes the sensor, a signal is transmitted to the control panel, which in turn uses the electrical wiring of the house to send signals to Remote Chimes, Lamp Modules, or Wall Switch Modules.

Accessories

REMOTE MINI SIREN RS01
A very loud 119 decibel mini siren that simply plugs into the *AutoAlert* Controller. Comes with 10 feet of cable.

REMOTE STROBE RL01
Bright flashing Strobe simply plugs into the *AutoAlert* Controller. Ideal for hearing impaired or noisy areas. Specify Red, Blue or Amber. Comes with 10 feet of cable.

VEHICLE SENSING PROBES
Additional Sensing Probes may be added to monitor different areas or driveways. Lengths available from 10' to 1000'.
