Sensaphone, Inc. Announces that Sensaphone® 2000 Monitoring/Reporting System is Ideal for HVAC & Refrigeration Applications

Sensaphone 2000 system monitors critical operations 24-hours-a-day to alert users to potential problems with temperature, power, and more

ASTON, PA—Sensaphone, Inc., a pioneer in remote monitoring and control solutions, recommends its Model 2000 system for HVAC and refrigeration systems. The Sensaphone 2000 can prevent costly problems, help avert downtime, and maintain peak operating performance—one package providing thousands of dollars in potential savings.

From cold storage to restaurant walk-in units, Sensaphone 2000 monitors HVAC systems, refrigeration units, chillers, or other untended operating facilities around the clock. The system tracks critical environmental and operating conditions that are essential to efficient HVAC & refrigeration systems, such as temperature changes (ranging from cryogenics to industrial ovens), power failures & surges, pressure, timers, alarms, excess humidity, water seepage, floods, and intrusion.

Use of Sensaphone 2000 helps ensure that equipment continues to operate optimally for quality of air and ventilation, as well as accurate temperatures in critical applications for added safety and security. “The Sensaphone 2000 system can pay for itself in reduced downtime or repair costs with its first alert call,” said Pete Ferry, Technical Service Supervisor. “Sensaphone 2000 alerts users to take appropriate action to minimize or prevent damage, repair costs, disruptions, and downtime.”

Sensaphone 2000 also affords great flexibility by allowing users to receive notification of problems and solicit reports from any location at any time, and enables real-time data and event logging to record information at specified intervals.

About Sensaphone 2000

Sensaphone 2000 can report on up to eight (8) remote, analog or digital conditions, including room temperature, outside temperature, humidity, tank levels, tank temperature, pressure, flow rates, flooding, and HVAC controllers, plus power failure. It can be programmed to communicate with up to 32 destinations to deliver alarm messages or status reports in real-time, and user programmability allows customization. Sensaphone 2000 also has extensive built-in data-logging features capable of storing up to 32,000 records. It has the most flexible dial-out capabilities of all Sensaphone models—from any combination of telephones, fax machines, pagers, e-mail accounts, or computers.

About the Sensaphone Product Line

There is a Sensaphone model for almost any application. The product line includes:

- IMS-4000 Infrastructure Monitoring System for networks, servers and equipment;
- Sensaphone SCADA 3000 (the first low-cost, integrated SCADA monitoring & control system);
- Sensaphone 2000 (for advanced monitoring with 8 universally configurable inputs and data logging);
- Sensaphone Express II (for comprehensive monitoring with up to 48 dialout numbers, up to 40 input channels, and real-voice alarm dialout); and,
- Model 4100, Model 1108, and Model 1104 (for low-cost, comprehensive monitoring).

Sensaphone, Inc. stands at the forefront of remote monitor and control solution design, setting industry standards for advancements in technology. Its family of Sensaphone products provides a comprehensive line of feature-rich, flexible technology for monitoring equipment, safeguarding property, and reporting critical data. Sensaphone, Inc. serves a broad range of applications/industries, including telecommunication, network servers, computer rooms, oil & gas, water/wastewater, HVAC & refrigeration, science/health labs, agriculture, greenhouses, and vacation homes. For more information, call (610) 558-2700 or visit www.sensaphone.com.
