## **Sensaphone® Monitoring/Reporting Systems Provide Significant Cost Savings in Aquaculture Applications**

Sensaphone systems monitor for potential disasters in marine and freshwater aquariums to prevent loss of animals and inventory.

**ASTON, PA** — Sensaphone, Inc., a pioneer in remote monitoring and control systems, offers a family of Sensaphone systems to provide 24-hour-a-day reporting and monitoring, which enables aquaculture personnel in computerized equipment facilities to identify potential disasters and prevent damage to animals and loss of inventory.

Sensaphone systems help aquaculture personnel to identify problems quickly and easily by monitoring for power failures, temperature changes, fire and smoke alarms, water leaks, floods, excess humidity, and intrusion. Users can attest that a Sensaphone system pays for itself the first time it notifies of a problem.

For example, an important feature of Sensaphone systems in aquaculture applications is the capability to monitor tanks for overflow and leaking water, which helps personnel prevent loss of animals or even loss of the whole crop. It also monitors for pump failures to prevent cross contamination among tanks. Another advantage is the systems' flexibility that allows personnel to receive notification of problems and solicit reports from any location at any time and react immediately. The systems can distribute data reports and alarm messages via a combination of telephones, fax machines, pagers, e-mail accounts, or computer modems; and alarm messages to numeric and alphanumeric pagers as well.

Sensaphone systems also monitor a narrow temperature range—a great advantage to aquatic facilities. By monitoring aquariums with a tolerance of  $\pm 5$  degrees, personnel can pinpoint problems or prevent damage caused by a change in temperature. This enables users to prevent costly problems and maintain peak operating performance—for thousands of dollars in potential savings.

In addition, Sensaphone systems monitor security for open windows and doors to alert for intrusion and sound for smoke detectors or other alarm mechanisms, so personnel can avoid or minimize damage. Aquatic facilities also benefit from Sensaphone systems' magnetic switch used to lock cabinets that hold or distribute sensitive doses of critical ingredients such as pH, for further security and peace of mind.

## About the Sensaphone Product Line

There is a Sensaphone model for almost any application. The product line includes:

- IMS-4000 Infrastructure Monitoring System for networks, servers and equipment;
- Sensaphone SCADA 3000 (the first low-cost, integrated SCADA monitoring & control system);
- Sensaphone 2000 (for advanced monitoring with 8 universally configurable inputs and data logging);
- Sensaphone Express II (for comprehensive monitoring with up to 48 dialout numbers, up to 40 input channels, and real-voice alarm dialout);
- Model 4100, Model 1108, and Model 1104 (for low-cost, comprehensive monitoring of homes and smaller facilities).

Sensaphone, Inc. stands at the forefront of remote monitor and control solution design, setting industry standards for advancements in technology. Its family of Sensaphone products provides a comprehensive line of feature-rich, flexible technology for monitoring equipment, safeguarding property, and reporting critical data. Sensaphone, Inc. serves a broad range of applications/industries, including telecommunication, network servers, computer rooms, oil & gas, water/wastewater, HVAC & refrigeration, science/health labs, agriculture, greenhouses, and vacation homes. For more information, call (610) 558-2700 or visit [www.sensaphone.com](http://www.sensaphone.com).
